

Question: 1

Which of the following statements best reflects the Agile principle of 'Working software over comprehensive documentation'?

- A. Every project must have comprehensive documentation
- B. Documentation must be created only when necessary
- C. Documentation should be prioritized over working software
- D. Working software is not necessary as long as comprehensive documentation is available

Answer: B

Explanation:

Option 1: This option is incorrect as Agile values working software over comprehensive documentation. While documentation may still be necessary, it should not be the primary focus. Option 2: This option is correct. This statement upholds the Agile principle that working software is more important than comprehensive documentation. It emphasizes that documentation should be created only when necessary. Option 3: This option is incorrect. This statement contradicts the Agile principle of valuing working software over comprehensive documentation. The priority should be creating a working product rather than just documenting every detail of the process. Option 4: This option is incorrect. The Agile principle values working software as the primary measure of progress, and comprehensive documentation as a secondary measure. This means that comprehensive documentation cannot replace working software.

Question: 2

Which of the following describes a key role of the Scrum Master in the framework?

- A. Ensuring the team meets their sprint goal by assigning tasks to team members.
- B. Facilitating the daily Scrum to ensure the team is on track and addressing any impediments.
- C. Participating in the sprint review to provide feedback on team performance.
- D. Writing user stories and managing the product backlog.

Answer: B

Explanation:

Option 1: Incorrect. The Scrum Master is not responsible for assigning tasks to team members. Rather, the team collectively decides how to best meet their sprint goal. Option 2: Correct. The Scrum Master facilitates the daily Scrum to ensure the team is on track and addressing any impediments. This is a key role in ensuring the team is following the Scrum framework. Option 3: Incorrect. While the Scrum Master may participate in the sprint review, their role is not to provide feedback on team performance.

Option 4: Incorrect. The Product Owner is responsible for writing user stories and managing the product backlog. The Scrum Master is not responsible for this role

Question: 3

What is the recommended size of a Scrum Development Team?

- A. Any number of individuals who can work effectively together
- B. Less than 10 individuals
- C. At least 10 individuals to ensure a diverse skillset
- D. More than 15 individuals to ensure high productivity

Answer: B

Explanation:

Option 1: This option is incorrect because while Scrum does not dictate a strict team size, it is recommended to keep the team small enough to be agile and work closely together. Option 2: This option is correct because Scrum recommends the development team to be no more than 10 people to remain effective and efficient. Option 3: This option is incorrect because while a diverse skillset is important, Scrum emphasizes that each member of the team should be cross-functional and capable of contributing in multiple areas. Option 4: This option is incorrect because a team size larger than 10 can lead to communication and collaboration challenges, as well as decreased efficiency.

Question: 4

During Sprint Planning, which of the following is a best practice for the Development Team to consider when planning the Sprint Backlog?

- A. The Development Team should only select items from the Product Backlog that the PO has already prioritized.
- B. The Development Team should always fill the Sprint Backlog to the maximum capacity to ensure they deliver the most value possible.
- C. The Development Team should include all items from the Product Backlog in the Sprint Backlog
- D. The Development Team should estimate the effort required to complete each item in the Sprint Backlog

Answer: D

Explanation:

Option 1: This is incorrect because the Development Team is responsible for selecting the items from the Product Backlog that they can realistically complete during the Sprint. The PO prioritizes the Product Backlog to guide the Development Team in their selection process. Option 2: This is incorrect because the Development Team should not over-commit to the amount of work they can realistically complete during the Sprint. Over-committing can result in the team not being able to deliver the agreed-upon Sprint Goal. The Development Team should aim to complete as much of the Sprint Backlog as possible, but not at the expense of quality or the Sprint Goal. Option 3: This is incorrect because not all items in

the Product Backlog are relevant to the current Sprint Goal. The Development Team should only select the items that are necessary to achieve the Sprint Goal. Option 4: This is correct because the Development Team should estimate the effort required to complete each item in the Sprint Backlog to ensure they can realistically complete all items within the timebox of the Sprint. These estimates can also help the Development Team to identify potential roadblocks and adjust their Sprint plan accordingly

Question: 5

InBDD, what is the purpose of the 'Given' clause?

- A.To describe the expected outcome of the scenario
- B.To describe the actual outcome of the scenario
- C.To describe the initial context or state of the scenario
- D.To describe the actions performed during the scenario

Answer: C

Explanation:

Option 1: This option is incorrect because the purpose of the 'Given' clause is to describe the initial context or state of the scenario, not the expected outcome. Option 2: This option is incorrect because the purpose of the 'Given' clause is not to describe the actual outcome of the scenario, but rather the initial state. Option 3: This option is correct because the 'Given' clause is used to describe the initial context or state of the scenario. It sets up the preconditions for the scenario which makes it possible to test a specific behavior. Option 4: This option is incorrect because the purpose of the 'Given' clause is not to describe the actions performed during the scenario, but rather the initial state or context
